

## Description

**BLASTBAG™ SUA** is the most affordable inflatable blast hole blocker specifically designed for the Indian market. This product consists of aerosol can which contains flammable gas. This aerosol features a single speed inflation mechanism with an innovative pressure sleeve outer layer. This sleeve allows for the user to vary the grip time based on position of the pressure sleeve. The can is contained with a single strong gas tight bladder which ensures the bag never leaks or fails.

The **BLASTBAG™ SUA** is the most economical and easiest to use BLASTBAG for quick and safe hole plugging, void management, decking or creating permanent barriers in blast holes.

## Application

The **BLASTBAG™ SUA** is available for hole sizes from 150mm through to 311mm. The **BLASTBAG™ SUA** features a single actuator with a moveable pressure sleeve that lets you control how fast the product inflates. Leaving the sleeve fully on slows the inflation, versus pulling the sleeve halfway increases the speed of inflation. Once you depress the actuator, the **BLASTBAG™ SUA** will start to inflate and this is when you lower it using the built in hangtag to tie onto a tape measure, to lower to the required depth in a hole. Once it grips the side of the wall, a pull on the tape measure will break the hangtag allowing for retrieval of the tape measure. This process ensures a fast and easy turnaround for hole blocking regardless of the situation.

**BLASTBAG™ SUA** is used in the Indian market in a variety of ground conditions, temperatures and mine types. Contact MTi Group for more information regarding product use.
